

Case Study

Eagle Wharf, Peckham

HOLLYBROOK

Project Overview

Continuing our reputation as the off-site glazing specialists, this residential project was installed off-site in conjunction with our strategic partner FP McCann.

Working alongside McCanns, who are the UK market leader in pre-cast concrete, we were able to deliver an innovative solution. This delivered a more cost effective approach to more traditional methods with all glazing installed off-site.

The prestigious project involves the delivery of bespoke student accommodation for a respected London University. The site is bordered by the Surrey Canal Walk park and is a short stroll from Peckham Rye station. The development will cement the location's cultural quarter status, alongside the Mountview Academy of Theatre Arts and award-winning Peckham Library.

Project Requirements

One of the project specific design features at Eagle Wharf was the perforated panels. These needed to be decorative as well as structural to provide containment. Our bespoke fixing details allowed for a very neat finish and met the architectural intent.

We were able to provide a solution that can also be utilised on other upcoming projects. Perforated panel designs are proving extremely popular at the moment and at RED we can provide the most cost effective solution to meet the project requirements due to our knowledge and understanding of this unique façade feature.

Working with the team from RED has been an absolute pleasure. They have fully embraced MMC and their partnership approach with the guys from FP McCann is extremely refreshing. We are very much looking forward to working with them again."
